

# Heating, Ventilation, Air Conditioning & Refrigeration

University of Mumbai

Examination Summer 2022

**Program:** Mechanical Engineering

**Curriculum Scheme:** REV- 2019 'C'  
Scheme

**Examination:** TE

**Semester:** VI

**Course Code:** MEC603

**Course Name:** HVAC&R

**Time:** 2 hour 30 Minutes

**Max. Marks:** 80

- N. B. :
1. All questions are **compulsory**.
  2. Assume suitable data if required and state it clearly.
  3. Use of Steam Table, Psychrometric chart, P-H Chart is permitted.

<b>Q1.</b>		Choose the correct option for following questions. All the Questions are compulsory and carry equal marks
1.		If a heat pump cycle operates between the condenser temperature of +27°C and evaporator temperature of -23°C, then the Carnot COP will be
Option A:	0.2	
Option B:	1.2	
Option C:	5.1	
Option D:	6	
2.		For summer air conditioner which of the following psychrometric process is applicable
Option A:	Cooling & Dehumidification	
Option B:	Only Cooling	
Option C:	Cooling & Humidification	
Option D:	Only dehumidification	
3.		In case of sensible cooling of air, the coil efficiency is given by
Option A:	BPF-1	
Option B:	1-BPF	
Option C:	1+ BPF	
Option D:	1/BPF	
4.		In load estimation, $RSH = 39$ and $RLH = 13$ then what will be value of $RSHF$
Option A:	0.36	
Option B:	0.29	
Option C:	0.47	
Option D:	0.75	
5.		Heat is absorbed by the refrigerant, during vapour compression refrigeration cycle in
Option A:	Compressor	
Option B:	Condenser	

Option C:	Evaporator
Option D:	Throttling valve
6.	The boiling point of ammonia is
Option A:	-100°C
Option B:	-50°C
Option C:	+33.3°C
Option D:	-33.3°C
7.	Atmospheric air with DBT of 28°C and WBT of 17°C is cooled to 15°C without changing its moisture content. Find original relative humidity, Final relative humidity and Final wet bulb temperature
Option A:	34% ,73% , 12°C repectively
Option B:	64% ,33% , 12°C repectively
Option C:	74% ,23% , 12°C repectively
Option D:	94% ,13% , 12°C repectively
8.	Equal friction method of designing air conditioning ducts
Option A:	Is ideal when the system is balanced
Option B:	Is ideal when the system is not balanced
Option C:	Is ideal only for return ducts
Option D:	Is ideal for none of the above
9.	When the moisture is added in to air at constant dry bulb temperature the process is known as
Option A:	Dehumidification
Option B:	Humidification
Option C:	Sensible cooling
Option D:	Sensible heating
10.	In HVACR industry refrigerant Air is designated as
Option A:	R-717
Option B:	R-744
Option C:	R-764
Option D:	R-729

Q2	Solve any Four out of Six Questions	5 marks each
A	Define i) Relative humidity ii) Ton of Refrigeration iii) Degree of Saturation, iv) Dew point temperature v) Coefficient of performance	
B	What is the effective temperature? Which are the factors governing effective temperature?	
C	What are the properties of good refrigerant? Compare the primary and secondary refrigerant with few examples.	
D	Explain the various methods of duct design	
E	Explain with suitable sketch working of Simple vapor absorption refrigeration system.	
F	Explain the effect of changing evaporator pressure & condenser pressure on COP of VCR cycle with P-H Diagram.	

<b>Q3</b>	<b>Solve any Two Questions out of Three</b>	<b>10 marks each</b>
A	<p>The cockpit of a jet plane is to be cooled by a simple air refrigeration system. The data available is as follows.</p> <p>Cockpit cooling load = 20 TR  Speed of the plane = 1000 km/hr  Ambient air temperature = -15°C  Ram efficiency = 90%  Pressure ratio in the main compressor = 3  Pressure drop in the heat exchanger = 0.1 bar  Isentropic efficiencies of main compressor and turbine = 80%  Temperature of air entering the cooling Turbine = 30°C  Pressure of the air leaving the cooling turbine = 1.06 bar  Pressure in the cockpit = 1 bar  If the cockpit is to be maintained at 25°C find</p> <ol style="list-style-type: none"> <li>1) Stagnation temperature and pressure of air entering the main compressor</li> <li>2) Mass flow rate of air to cockpit</li> <li>3) Power required to drive the refrigerating system</li> <li>4) C.O.P of the system</li> </ol>	
B	Explain summer and winter air-conditioning processes with the help of psychrometric chart.	
C	<p>A Simple NH<sub>3</sub> vapour compression system has compressor with piston displacement of 3 m<sup>3</sup>/min, a condenser pressure of 12 bar and evaporator pressure of 2.5 bar. The liquid is sub-cooled to 20°C by soldering the liquid line to suction line. The temperature of vapour leaving the cooling water is 6000 KJ/hr and volumetric efficiency of compressor is 0.8. Use PH Chart. Find:</p> <ol style="list-style-type: none"> <li>1) Capacity of the system</li> <li>2) Indicated power</li> <li>3) COP of the system</li> <li>4) Draw P-H and T-S Diagram</li> </ol>	

<b>Q4.</b>		
<b>A</b>	<b>Solve any Two Questions out of Three</b>	<b>5 marks each</b>
i.	Write a note on ICE plant	
ii.	<p>Dry bulb temperature = 30°C  Wet bulb temperature = 20°C  Barometer reading = 740 mm of Hg  Using steam table. Determine</p> <ol style="list-style-type: none"> <li>1. Partial pressure of water vapour</li> <li>2. Relative humidity</li> <li>3. Dew point temperature</li> <li>4. Specific humidity</li> </ol> <p>Vapour density</p>	
iii.	Explain the use of heat pump for heating and cooling cycle with neat diagram.	
<b>B</b>	<b>Solve any One Question out of Two</b>	<b>10 marks each</b>
i.	<p>The following data refers to the office of air conditioning plant having maximum seating capacity of 30 occupants.</p> <p>Outside design conditions: 36°CDBT and 27°CWBT  Inside design conditions: 22°CDBT and 55% RH  Solar heat gain: 8500 W  Latent heat gain per occupant : 100 W</p>	

	<p>Sensible heat gain per occupant : 83W      Lightening load: 2500 W      Sensible heat load from other sources : 12000 W      Infiltration load: 15 m<sup>3</sup>/min</p> <p>1) Assuming 40% fresh air and 60 % of recirculated air passing through the evaporator coil and the by-pass factor of 0.12, Find dew point temperature of the coil and capacity of the plant.</p>
ii.	<p>An air conditioning plant is required to supply 60 m<sup>3</sup> of air per minute at a Dry bulb temperature of 21 deg C and 55% Relative humidity. The outside air is at dry bulb temperature of 28 deg C and 60% relative humidity. Determine the mass of water drained and capacity of the cooling coil. Assume the air conditioning plant first to dehumidify and then to cool the air</p>
